Commando™ Coat and Super Pants™ with Freedom® Design

An incredibly lightweight system with short coat and contoured, high-waist design pants

Commando™ Coat – Built for Action

The Commando™ is a short length coat (29", 32" or 35") that is incredibly lightweight and built for action. It promotes comfort and full mobility while delivering the thermal overlap you need – even with your arms fully extended. It includes all of Janesville's industry-leading Freedom® Design features in the underarms and elbows. There's no tugging, pulling or binding. This means greater mobility, reduced stress and increased safety.

Super Pants™ with High-Waist Design

Super Pants™ have a slightly higher waistline in back for bent-over-protection and an innovative knee design that gives you ease of flex, as well as abrasion resistance and thermal reinforcement. Take-up straps on each side allow you to adjust the fit of the pants for superior comfort and a tailored feel. Nine inches of Semper Dri™ in the lower legs repels water to keep your pants dry and the working weight low.

Integrated Lumbar Support

Super Pants™ are available with the optional Lion Lumbar Support System. This system is integrated into the Super Pants™ and is orthopedically designed to provide adjustable mechanical support when you're lifting, bending forward, standing or performing emergency rescues.

Integrated lumbar support. Cut-away illustration shows support pad for the lumbar area.
