# Super Coat™ and Deluxe High-Back™ Pants with Freedom® Design

Lightweight coat with unique comfort features and high-back pants

## Super Coat™ – Outstanding Mobility

The Super Coat™ is designed to deliver optimum comfort and mobility. Its Free Range™ Sleeve System features a contoured design to create a natural bellows effect at the shoulders to reduce hem rise and sleeve travel when your arms are fully extended. The contour design also creates a natural bend when the elbow flexes to make movement free and easy.

## No Shoulder Seams Mean Added Comfort

You won't feel the shoulder seams of your coat digging into your skin when you wear your SCBA over the Super Coat™. That's because the kimono-type design has arm seams along the back where they won't conflict with SCBA straps.

## Deluxe High-Back™ Pants for Superior Thermal Protection

Deluxe High-Back™ Pants have a back panel that extends six inches over the low-rise waist for added thermal protection, especially when bending over. Take-up straps on each side allow you to adjust the fit of the pants for a tailored feel.

The Freedom® Design features in the crotch and knees enhance mobility on the fireground, especially when crawling, climbing or bending. Nine inches of Semper Dri™ in the lower legs repels water to keep your pants dry and the working weight low.

*Deluxe High-Back™ pants' back panel extends 6" over low-rise waist for added thermal protection.*
