

FIRE SAFETY TIPS FOR HOME AND WORK

A fire can double in size every 30 seconds and engulf a building in a matter of minutes.

If you can't safely put out the fire yourself, **call 911** and get everyone out of the building.

Smart Charging

To reduce fire risks when charging devices...

Use the original cord and charger, or one approved by the manufacturer.

Always charge on a hard, flat surface never on a bed, couch or pillow.

Don't use a device if it feels overly hot, starts to swell or begins to smoke.

Unplug the device when it's fully charged so you don't overheat the battery.

Charge large items like e-bikes and scooters outside if possible.

Fire Safety At Home

Install smoke alarms on every level of your home and inside bedrooms. Remember to test the alarms monthly and replace the batteries at least once a year.

Stay in the kitchen while cooking to keep an eye on the oven and stove.

Create a fire escape plan and practice it so everyone knows the drill.

Buy a fire extinguisher or fire blanket and learn how to use them.

Fire Safety At Work

Know where the fire exits and stairways are in your building. Avoid the elevator during a fire; it can malfunction or quickly fill with smoke.

Never leave portable heaters unattended or close to anything that can catch on fire.

Always report fire hazards like frayed electrical cords and overloaded outlets.

Take part in your company's safety training sessions and evacuation drills.

We provide cutting-edge fire extinguisher training products to fire departments and workforces in all industries. No matter your training needs, our team can help prepare you for whatever comes next.
